Hazardous Materials

CHEMICAL TRACKING

Annually, NASA Langley is required to report hazardous materials to environmental regulatory agencies.

The *Chemical Material Tracking System (CMTS)* is the web-based tool that LaRC utilizes to track the storage and usage of its hazardous materials.

The CMTS includes the following inventory management requirements:

- Submittal of Langley Form 44 (LF44) prior to the purchase of hazardous materials
- Addition and update of Safety Data Sheets (SDSs) in the online SDS library
- Generation of CMTS labels for tracking of containers
- Consumption of CMTS container IDs to generate usage data

The proper use of CMTS provides LaRC's Environmental Staff with significant data necessary for environmental reporting.

**Questions about CMTS or inventory tracking requirements?
