Waste Management

RECYCLING

DID YOU KNOW? There's no limit on the amount of times aluminum can be recycled, and recycling plastic materials saves a lot of energy and resources that would have otherwise been consumed in the production of new plastics.

In FY17, NASA Langley recycled 4,162 pounds of aluminum cans, and 6,658 pounds of plastic bottles. Keep up the great work! Recycling activities on the Center result in returned income for LaRC to use on sustainability initiatives.

Please help LaRC maintain a robust recycling program by:

- Putting clean recyclables in their appropriate bins (and not in the trash!)
- Keeping non-recyclable items out of recycling bins

If you have questions about waste minimization, please contact SPEEB at 4-8058.
