MEMORANDUM FOR THE RECORD

FROM: 010/Director

SUBJECT: Environmental Management System at NASA Langley Research Center
Declaration of Conformance

As the Director of the NASA Langley Research Center (LaRC), I have determined that LaRC has an Environmental Management System (EMS) that is in place and is viable.

Furthermore, I confirm that I, and senior management, have reviewed the EMS for conformance with NASA Procedural EMS Requirements and Center EMS requirements.

The determination that the EMS is in place and is viable has included consideration of the results of the following assessments:

- a) No findings resulted from EMS Internal Audits conducted as part of the Center's routine Internal Assessment Program (October 2018 and November 2019).
- b) Environmental and Energy Functional Review audit conducted by NASA Headquarters (December 2017) has one remaining finding that is closely monitored as LaRC's EMS high priority (Water Quality).

The audit finding, corrective action plan, and closure status has been recognized by appropriate Center management.

A handwritten signature in black ink that reads "Clayton P. Turner".
